

PROJECT DESCRIPTION:

This project replaces the aged booster station pumps and equipment with new equipment within a new one-story masonry block building. The new booster pump equipment and associated electrical and mechanical systems will be updated to current industry standards. Other ancillary improvements include new underground piping, fencing, site grading and site paving. Construction is expected to start no later than March 2016.

This project is one of many related projects to improve fire protection by increasing water storage, water reliability and water availability for the Jackson Oaks neighborhood.

PROJECT LOCATION:

The Oak Canyon Booster Station is located at Oak Canyon Lane.
